

# GETS DASH BOARD

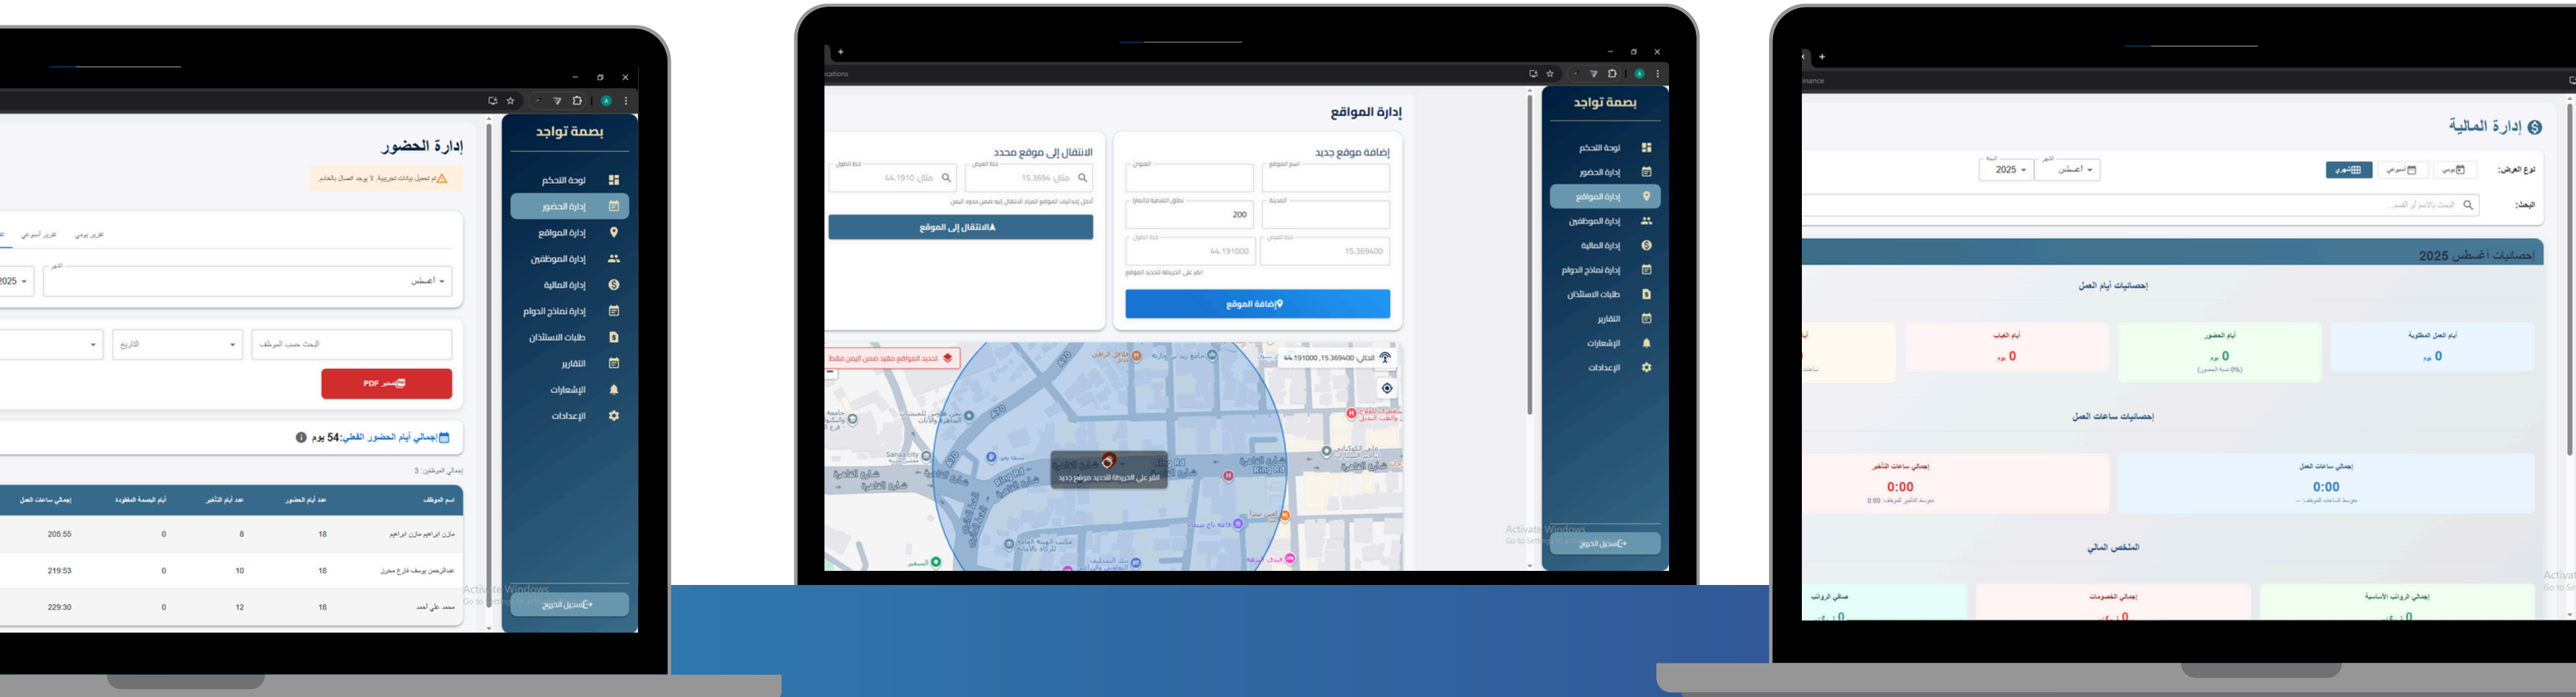

# About Us

The Admin Dashboard is designed to provide full control and visibility over the attendance system. It enables administrators to manage users, monitor attendance records in real-time, review leave requests, generate detailed reports, and configure system settings. With a clean and intuitive interface, the dashboard ensures efficiency, accuracy, and transparency in managing the organization's attendance process.

# Admin Dash Board

Our Attendance Fingerprint System combines biometric verification with smart location tracking to deliver a modern, secure, and efficient solution for managing presence. With a simple interface, real-time notifications, and powerful admin tools, the system ensures accuracy, transparency, and ease of use for both employees and managers.

## ➤ User Management

The dashboard provides a comprehensive User Management system, allowing administrators to add, edit, and remove employees or students, assign roles and permissions, and keep all user information organized in one place. This ensures smooth operation and proper control over access within the system.

## ➤ Notifications Management

Administrators can manage all notifications from the dashboard, controlling alerts for check-ins, check-outs, delays, absences, and leave approvals. This feature ensures that both users and admins stay informed in real-time, improving overall communication and attendance monitoring.

## ➤ Add Supervisor

The dashboard allows administrators to add new supervisors easily, assigning them specific roles and permissions to manage attendance, leave requests, and monitor user activity efficiently.

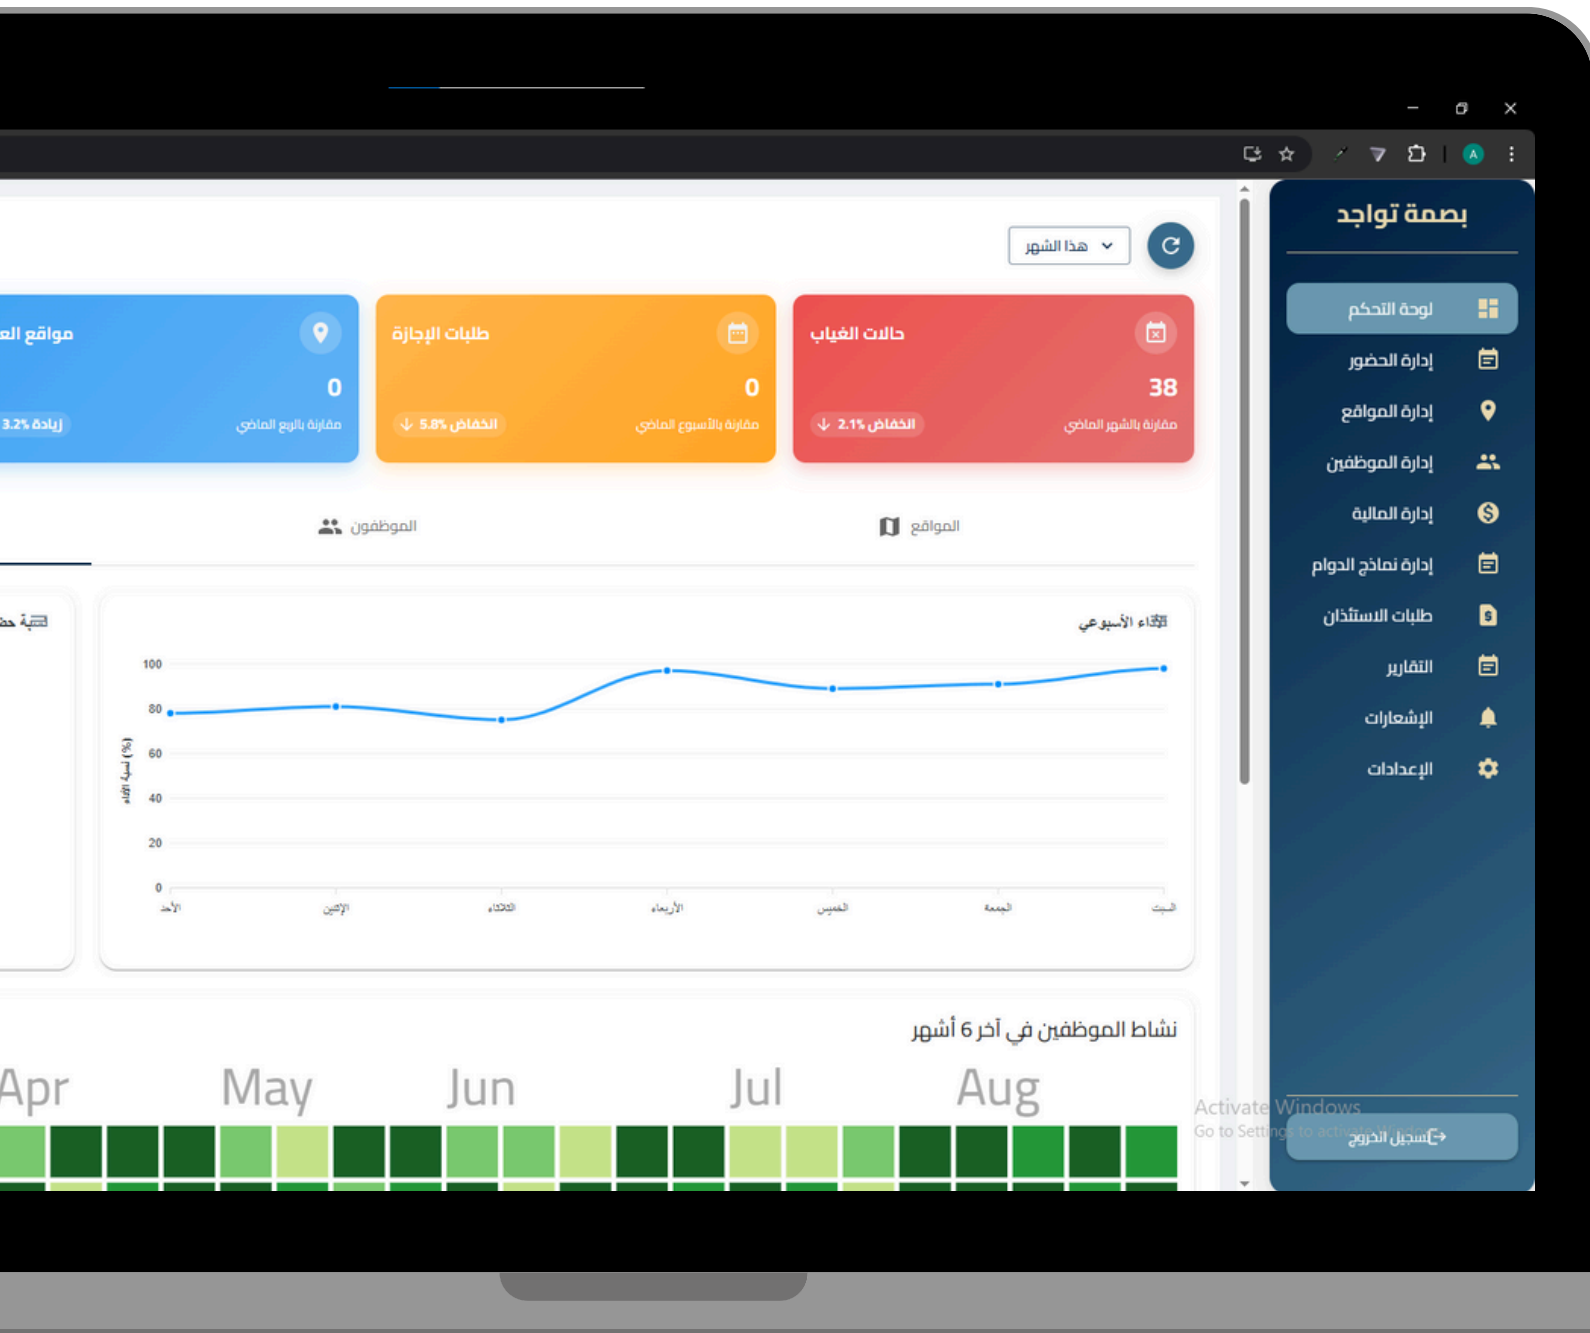

## ➤ Change Password

Admins and users can securely update their passwords through the dashboard, ensuring account safety and protecting sensitive attendance data.

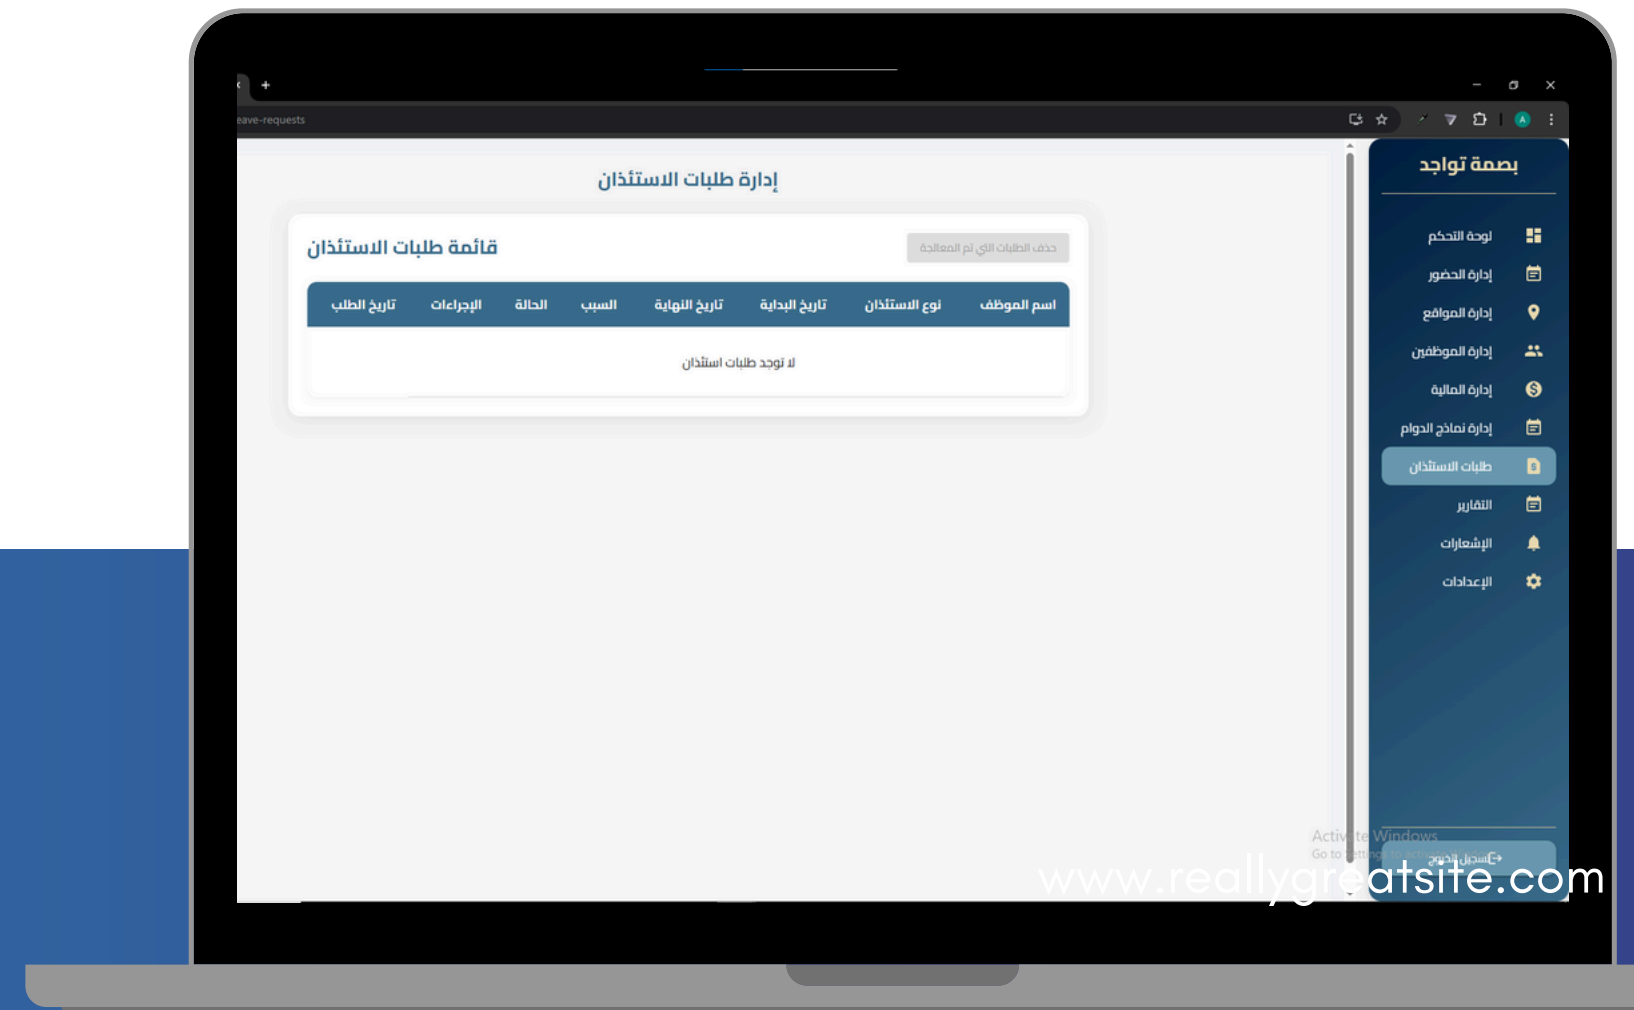

# Thank You Let's Work Together

If you're looking for a dedicated Laravel developer who builds clean, scalable, and efficient web applications — I'd love to connect!
